

How to use the urine container

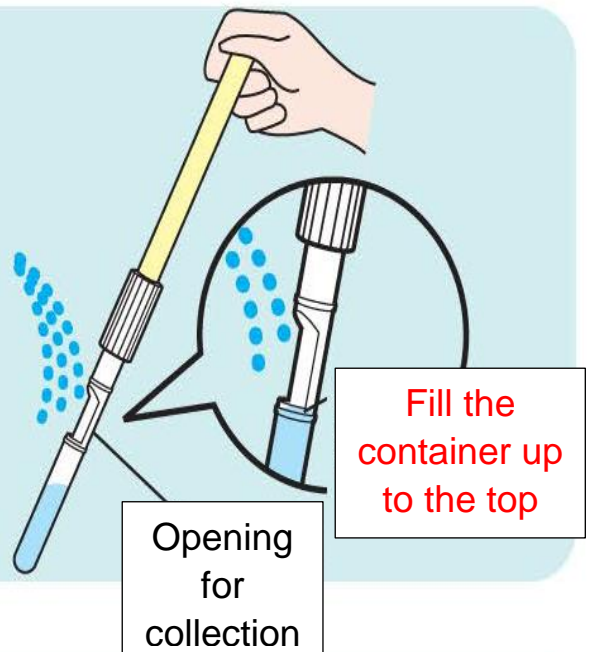

1

Remove the container straight out of the yellow cover and connect the two parts by tightly inserting the top (opening) of the yellow cover into the cap of the container.

2

After connecting the two parts, make sure the container is facing downward, hold on to the yellow cover, and collect your urine sample by urinating into side opening of the container.

3

After collecting your urine sample, reinsert the container into its original position inside the yellow cover. Insert the container as far as it will go until you hear it click into place.
